

# Disseminating Inventory, Revision 2

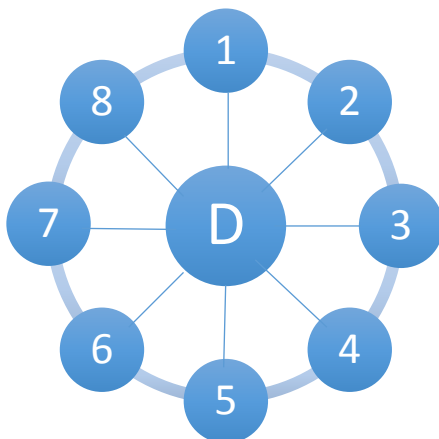

Center for Family Excellence, Inc.

Jerome Taylor, PhD, Lenall Thomas, PhD, MSW, & Beverly Walker, MSW

September 19, 2017

**F**OR MORE THAN 25 YEARS, we have designed and evaluated a large number of interventions intended to attenuate racial and socioeconomic inequities across a wide range of educational, social, mental, and physical health domains. We are now considering how to disseminate our intervention products to wider audiences—local to national and international. Toward this end check off ( ✓ ) The Academy’s capacity as of \_\_, \_\_, \_\_\_\_ to establish data and information structures that permit us:

___	1. to evaluate the quality of initial training in each policy and practice P designed to accelerate movement toward justice (outcome equity) and freedom (fair access to the nation’s opportunity and service structures).
___	2. to assess the quality of initial and ongoing implementation of each intervention P.
___	3. to measure the impact of intervention P.
___	4. to determine interrelationships among items 1, 3, and 3 for intervention P.
___	5. to create audiovisual as well as paper displays for sharing 1 – 4 for each P with our community of users, trainers, and consultants.
___	6. to enable instantaneous interactive exchanges between the community of users and expert consultants to improve the impact of intervention P ongoingly.
___	7. to develop procedures for identifying, featuring, and sharing the basis for exemplary performances on P with the full community of users of P.
___	8. to enhance intervention impact of P by sifting items 1 – 7 for clues that would be published on the web on a quarterly and annual basis.
<b>Disseminability of justice Works Policies and Practices D = (Sum of Checks/8) x 100, where 0 ≥ D ≤ 100.</b>	

## Expectation

The higher the value D, the more likely policies and practices promoting justice and freedom will be transferable to other sites with increasingly enhanced effects in all participating sites over time.
